

INSTRUCTIONS

- "Tool Belt" is a highly realistic, fully rigged Tool Belt prop designed for Genesis 9 Male. The Tool Belt is equipped with 9 different tools, all rigged and usable on their own as separate props. The tools are: Chisel, Cone Chisel, Flat Chisel, Hammer, Phillips Screwdriver, Slotted Screwdriver, Pliers, Long Nose Pliers, and Wrench.

- How To Use:

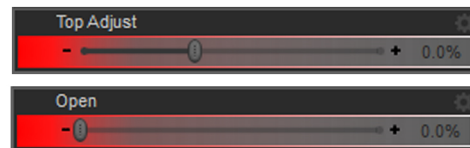

Select Genesis 9 (basic male) in the scene and click on the "Full Set" icon. This will load the Tool Belt, with all the tools, parented on the pelvis of the G9. The tools will be parented on their positions on the belt.

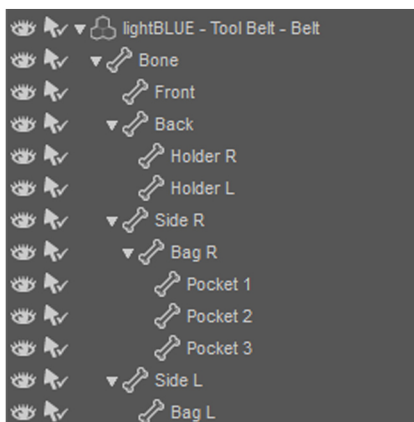

You can also load each item separately. If you want the belt to be parented on G9, select G9 before loading. If you want the tools to be parented on the belt, select the Tool Belt before loading.

Use the sliders for adjusting the top of the Wrench and for opening the Pliers (select the tool and go to Parameters/General).

The belt is not fitted, it is only parented to the pelvis. This will allow it to follow the figure, but if the figure is morphed, it might need some adjustments. To adjust the belt if needed, use the "Front", "Back", "Side R", and "Side L" bones. If the side bags get in the way of the thighs, you can adjust them with the "Bag R" and "Bag L" bones. The pockets and back holders also have their bones that you can use to adjust them to fit different objects/tools. If you need to move or rotate the complete prop, you can use the "Bone" bone to do so.

Load materials for each prop with that prop selected in the scene.
